

George Sertaridis

Cloud Platform & DevOps Engineer | CI / CD Engineer

📍 Thessaloniki, Greece | georgesertaridis@gmail.com | +30 6978284964 | linkedin.com/in/george-sertaridis

PROFESSIONAL SUMMARY

DevOps / Cloud Platform Engineer with 4+ years of experience supporting enterprise digital banking and telecom platforms. Strong ownership in CI/CD design, Azure DevOps, Kubernetes delivery, GitOps with ArgoCD, release process improvement, and platform automation. Experienced in collaborating with architects, developers, security teams, and stakeholders to improve deployment reliability, standardize delivery practices, and support multiple environments from development to production. Practical exposure to IaC using Terraform, Bicep, Helm, and Ansible, with strongest depth in CI/CD, GitOps, Kubernetes operations and release engineering.

CORE DEVOPS STRENGTHS

CI/CD & Release Engineering: Azure DevOps Services, reusable pipeline templates, GitLab CI/CD, Jenkins, GitHub Actions, semantic versioning, Release flows

Cloud & Kubernetes: Azure, AKS, Docker, Kubernetes environments across DEV/QA/UAT/Staging/Production, performance and scaling

GitOps & IaC: ArgoCD, Helm, Terraform, Bicep, Ansible; strongest ownership in GitOps-based delivery and pipeline automation

Observability & Reliability: Grafana, Prometheus, OpenTelemetry, Dynatrace, DevOps KPI dashboards, release reliability improvements

Resilience, HA & DR Awareness: High-Availability architecture design (HPAs/VPAs, multi-replica, pod disruption budgets, node affinity), AKS Cluster Health Monitoring, Incident Response Contributions, served as a DevOps SME during DR planning sessions.

Security & Compliance: Secure CI/CD practices, artifact management, vulnerability coordination, secret management (Azure keyvault), banking delivery context

Team Collaboration: Mentoring junior engineers, coordinating delivery, stakeholder communication, work intake and decomposition

PROFESSIONAL EXPERIENCE

Accenture — Cloud Platform & DevOps Engineer | March 2022 – Present | Client projects: Eurobank, Piraeus Bank, Deutsche Telekom

Eurobank — Omnichannel Digital Banking Platform | 2025 – Present

- Contributed to the redesign and improvement of SDLC and CI/CD processes for a large-scale omnichannel banking platform.
- Led the migration of CI/CD workflows from Atlassian tooling to Azure DevOps for 80+ microservices, designing reusable templates for microservices and libraries.
- Supported the migration of artifact management from Nexus to Azure Artifacts, improving traceability and dependency management across delivery teams.
- Worked with architects and developers to standardize pipeline patterns, agent pool usage, and release handoffs across platform teams.
- Monitored AKS cluster health for evictions and node failures, proactively reporting issues to support DR incident response.
- Built Power BI reporting dashboards for DevOps KPIs, including deployment frequency, lead time, and release reliability metrics.
- Coordinated a small DevOps team, mentoring junior members and supporting delivery planning across multiple platform workstreams.

Piraeus Bank — Omnichannel Digital Banking & Credit Origination Platforms | 2023 – 2025

- Designed and implemented Azure DevOps CI/CD pipelines for 45+ microservices across two banking platforms, improving delivery consistency and reducing manual effort.
- Managed and supported AKS-based environments across DEV, QA, UAT, Staging, and Production, helping maintain stable delivery paths between stages.
- Configured GitOps workflows with ArgoCD and Helm to support repeatable microservice deployments and environment consistency.
- Contributed to IaC and configuration automation using Terraform, Bicep, Ansible, and Helm, while focusing primarily on deployment automation and GitOps operations.
- Introduced release flow practices, semantic versioning, tagging strategies, and coordinated release management aligned with enterprise delivery standards.
- Supported platform engineering initiatives using Dapr Framework and Azure SDK for shared libraries and reusable platform components.

Deutsche Telekom — Application & Infrastructure Support | 2022 – 2023

- Provided application and infrastructure support for on-premise legacy systems, using Bash and shell scripting for automation and operational tasks.
- Contributed to CI/CD pipeline activities for monolithic applications using GitLab, Jenkins, Docker, and Kubernetes on-premise.

Accenture — Solution Architecture & Business Development Support | 2025 – Present

- Supported RFP activities by contributing DevOps solution input, cloud delivery considerations, and cost-aware platform recommendations.
- Identified platform and delivery gaps in client accounts and translated them into actionable tasks, features, and workstreams for engineering teams.

AI / AUTOMATION BANKING PROJECT

- Designed a prototype multi-agent AI system for Anti-Money Laundering investigation using LangGraph, LangChain, self-hosted LLMs, and LangSmith observability.
- Focused on explainability, audit trails, deterministic control paths, and privacy-aware local processing rather than autonomous black-box decision-making.

TECHNICAL SKILLS

Cloud: Azure, AWS Cloud Practitioner certified | **CI/CD:** Azure DevOps Services, GitLab CI/CD, Jenkins, GitHub Actions | **Containers:** Docker, Kubernetes, AKS, Helm, ArgoCD | **IaC / Automation:** Terraform, Bicep, Ansible, Bash, PowerShell, Python | **Observability:** Grafana, Prometheus, OpenTelemetry, Dynatrace, Power BI | **Security:** Secure CI/CD, vulnerability coordination, artifact management, secret management concepts | **Languages:** Python, Java, C#, SQL, YAML | **Practices:** Agile/Scrum, Gitflow, release flow, semantic versioning, SDLC documentation

EDUCATION & LANGUAGES

University of Ioannina - BSc with integrated MSc in Computer Science and Computer Engineering | 10/2014 – 10/2021

Languages: Greek native, English C2 Proficiency, German basic
